## **Problem Set 3**

Syed Waleed Mehmood Wasti

February 15, 2021

1. How big was the insurance .csv file (once uncompressed)? (i.e. what was the output in 3(e)?)

Ans. The file size is 5 MB.

2. How many lines did the CSV file have before doing the end-of-line (EOL) conversion? (see 3(g))

Ans. I get shown that it has 0 lines! Strange.

3. How many lines did the CSV file have after doing the EOL conversion? (see 3(j))

Ans. The file has 36,634 lines.

This was the result I got when I executed the command: `36634 FL_insurance_sample.csv`
